<u>%</u>	<u>Description</u>																																										
100	Normal; no complaints; no evidence of disease.																																										
≡																																											
90	Able to carry on normal activity; minor signs or symptoms of disease.																																										
≡																																											
80	Normal activity with effort; some signs or symptoms of disease.																																										
≡																																											
70	Cares for self; unable to carry on normal activity or to do active work.																																										
≡																																											
60	Requires occasional assistance but is able to care for most of own needs.																																										
≡																																											
50	Requires considerable assistance and frequent medical care.																																										
≡																																											
40	Disabled; requires special care and assistance.																																										
≡																																											
30	Severely disabled; hospitalization indicated although death not imminent.																																										
≡																																											
20	Very sick; hospitalization necessary; active supportive treatment necessary.																																										
≡																																											
10	Moribund, fatal processes progressing rapidly.																																										
≡																																											

3. MEDICAL INFORMATION

Cause of ESRD (HCFA 2728): _____

Diabetes Present? Yes No

Length of time on dialysis: _____

Current dialysis modality: _____

Biochemical Markers (average past 3 months):

Hemoglobin _____

Albumin _____

URR or KT/ V _____

0 Dead.
